LEWIS-BUILT HOMES

NOT SHOWN IN OUR CATALOG

The general catalog of Lewis-Built Homes offers a scope of building ideas wide enough to satisfy almost anyone. We believe this supplement should take the word "almost" out of the foregoing sentence. As evidence of our determination to make Lewis-Built Houses famous, not only for their own intrinsic value, but for their wide range of design and style, we present this supplement of 28 new houses for your consideration.

Most of these houses were added to the already comprehensive Lewis line since our 120-page catalog went to press. Our designers are constantly at work originating types of houses designed to please both eye and the pocket-book.

A Great Melting Pot for Ideas

Throughout the building world we are on the watch for new, original, sensible, useful ideas which we secure for our patrons, and apply them where they will do the most good. Thus, Lewis-Built Houses are the sum of the time-proven experience of centuries of building progress, plus our own expert designers, plus our famous Board of Building Supervisors, with their painstaking inspection, their lofty standards, and their determination that every Lewis-Built Home must, above all things, be practical.

These 28 Dwellings

All come under the same hard and fast guarantee that applies to the houses in the general catalog. Every statement made in the catalog applies to these 28 homes. Those on the reverse side of the sheet are described in full, as you will note. Space forbids full description of the 16 handsome homes that compete for your attention on this page. If one of them happens to be just the house you want—or even if you are only mildly interested in one—ask us for full description, floor plans and specifications. We will furnish them promptly, and put you under no obligations.

Did you ever, while out walking on a Sunday afternoon, come upon a house in the course of erection that seemed so inviting that you could not resist the temptation to slip in the open doorway and ramble through the rooms, imagining how you would arrange them if you were building the house, and perhaps picturing your own little family cozily ensconced within? Of course, you have. Everyone has—it is the most fun in the world.

Now just imagine that these 28 houses pictured here are all built and awaiting an owner to step in and take possession. Pick out the one with the most attractive exterior; walk right up to the porch—the front door is unlocked—step in and look around. If the arrangement does not quite suit you, we can make it suit you. If there is anything you want to know about it, just write us and if you really mean business, you can actually be moving into that very house inside of 90 days, saving enough money on the Lewis Ready-Cut System to comfortably furnish the home.

10 Reasons Why The Lewis Way Is The Only Way

1. **Lewis-Built Homes** are shipped with all materials WORKED and FITTED to EXACT SIZE and SHAPE. THERE is no uncertainty, no bother and NO WASTE.
2. **Lewis-Built Homes** are a combination of the best designs human ingenuity can produce, backed by an efficient factory organization and a lifetime knowledge of the building business.
3. **Lewis-Built Homes** are full of attractive features, of original design and beautiful proportions, and so carefully have they been thought out that the living in one of them is a time of continual contentment.
4. **Lewis-Built Homes** are manufactured from the best of well-seasoned materials, and the careful selection of what goes into them is only made possible by our many years of "knowing how."
5. **Lewis-Built Homes** are low in price because of our efficient quantity production and our policy of dealing direct,—and yet no better homes can be had at any cost.
6. **Lewis-Built Homes** are made in the heart of the Michigan timber country and are sold direct. You pocket all middlemen's profits.
7. **Lewis-Built Homes** eliminate expensive architect's fees. Complete plans that make it easy for you, come with every home.
8. **Lewis-Built Homes** save you fully one-half on your labor bill.
9. **Lewis-Built Homes** call for no extras. You know before you start to build just what your home will cost you.
10. **Lewis-Built Homes** are the finished product of the most complete home building organization in the world.

The Lewis-Built Way is a case of factory efficiency applied to home-building. If you should have an automobile made to order it would cost you twice as much as a ready-made one—and it would not run a bit better or last any longer. It's the same thing exactly in the case of your home. Think this over.
